Scientific Training and Mentoring for STEM Talents Symposium

With funding support from the Gifted Education Fund of the Education Bureau, the Science Academy for Young Talent of the CUHK Faculty of Science organised a 3-tier STEM training programme “Scientific Training and Mentoring for STEM Talents” for S4 to S6 students between Jul 2020 and Dec 2021. The programme aimed at providing students with quality extracurricular science and mathematics training whereby scientific knowledge of university levels 1 and 2 was taught in the first two tiers, followed by only the top 40% students eligible to join the next tier.

Following the completion of first two tiers of the training programme, 14 students who achieved exceptional performance joined Tier III training and conducted scientific research under the guidance of our academics. A symposium was held successfully on 11 Dec 2021 for students to showcase their research results. Project leaders, parents as well as their secondary school principals and teachers, were invited to join the students in sharing their achievements.

The Academy would like to take this opportunity to express our heartfelt thanks to the Gifted Education Fund and the Gifted Education Sector of the Curriculum Development Institute of the Education Bureau, the devotion of our teachers, the commitment of the students, as well as their parents and secondary school teachers’ support, all of which have been indispensable and made the programme a success.
